Hello collaborators!

Here's my score:

1. Look at the QR code of your vaccine passport.
2. Read it.
3. Read it again, this time recording it.

(Both "reading" and "recording" can here operate broadly).

All best,  
Jamie

This is a worthy, challenging score! Heartening to read a reference to Polanyi, and to orchids, in this context. I have much pondering to do...

>> Hi everyone.  
>> Thanks for further info and links on your scores, Francisco. I like the way approaches are dovetailing here. I sent a message with attachments to you all earlier this morning but it might have been too much data. In case it didn't reach you, I'll put the attachments in the GoogleDrive for Team 2 instead. There is a pdf of my slides of iteration work, and some articles about scores.
